

Your design. Your size. **Cut-ready.**

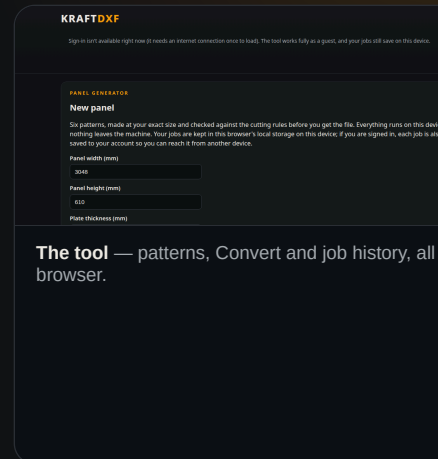

Launched 2026 · Browser-based DXF tool for laser & plasma cutting machines · Founder: **Quratulain Hasan**

ABOUT US

The file that won't fail on your machine

KraftDXF is a browser-based tool built for laser and plasma cutting machines. Fabricators told us the same story everywhere: clients send **pictures, not files** — and a bad file costs a plate. So we built the tool around one promise: **every DXF is checked before it is downloaded.**

Bridges are measured against the plate thickness, floating islands are removed or joined, and **every repair is listed in a change report** — **nothing is changed silently.** The tool runs entirely in the visitor's browser: designs never leave their device, and there is nothing to install. KraftDXF is founder-built, serving cutting shops in the Gulf, Australia and beyond.

15

built-in panel patterns — floral, modern & traditional

9 formats

JPG · PNG · WebP · GIF · BMP · AVIF · SVG · TIFF · PDF, up to 200 MB

0 errors

on CAD/CAM import checks — every contour closed, exact size

±0.5 mm

98–99% of the cut outline on design images

SERVICES

What KraftDXF does

01

Pattern library

Fifteen jali, floral and modern panel designs, **generated at the customer's exact size** — any width, any height, checked for their plate before download.

02

Convert — image to DXF

A design photo or scan becomes a **checked cutting file**: colours flipped, panel cropped, bridges thickened, islands fixed — with a change report and an honest warning when an image is too blurry to trust.

03

Cut-safety checks

The rulebook no other online converter applies: **minimum bridge ≥ 2× plate thickness**, zero floating islands, kerf applied — measured on the real geometry, not estimated.

04

Job quotes

From the finished file itself: **cut length, pierce count, cutting time and a price** the shop can print and hand to their customer.

PROOF

Real output files, checked the way CAM software checks them:

604

cut loops, 0 open paths

107 m

longest measured cut

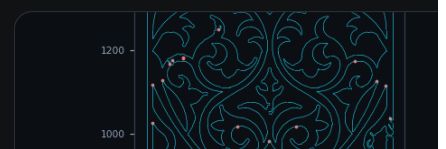

Exact

sizes to 0.1 mm

HOW IT WORKS

STEP 1 — PICK OR UPLOAD

A pattern at your size, or your own design image in any of 9 formats.

kraftdx.com

STEP 2 — WE CHECK THE RULES

Bridges and islands measured against your plate; unsafe files repaired or refused.

STEP 3 — DOWNLOAD & CUT

Checked DXF with its change report — printable quote for your customer.
